Business Understanding

- **Stakeholder:**

- Explorer Airlines

- **Business Problem:**

- Explorer Airlines has tasked me to provide prediction analysis on their passenger's satisfaction levels.

- **Business Question:**

- What key features do passengers find most important while traveling?

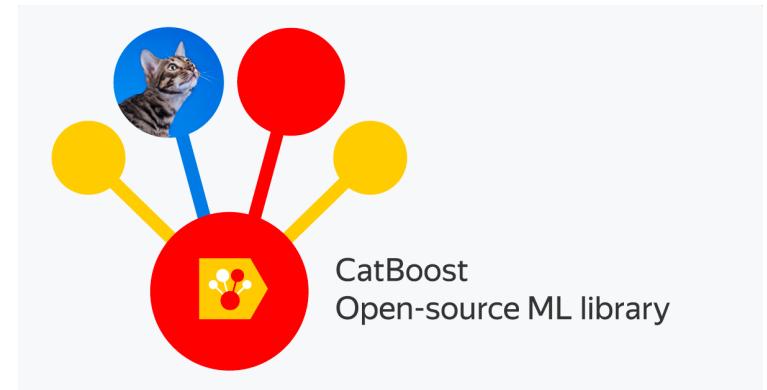

Data Understanding

- **Gender:** male or female
- **Customer type:** regular or non-regular airline customer
- **Type of travel:** the purpose of the passenger's flight (personal or business travel)
- **Class:** business, economy, economy plus
- **Flight distance:** The flight distance of this journey
- **Inflight wifi service:** satisfaction level with Wi-Fi service on board (1-5)
- **Ease of Online booking:** online booking satisfaction rate (1-5)
- **Food and drink:** food and drink satisfaction level (1-5)
- **Online boarding:** satisfaction level with online boarding (1-5)
- **Seat comfort:** seat satisfaction level (1-5)
- **Inflight entertainment:** satisfaction with inflight entertainment (1-5)
- **On-board service:** level of satisfaction with on-board service (1-5)
- **Leg room service:** level of satisfaction with leg room service (1-5)
- **Baggage handling:** level of satisfaction with baggage handling (1-5)
- **Checkin service:** level of satisfaction with checkin service (1-5)
- **Inflight service:** level of satisfaction with inflight service (1-5)
- **Cleanliness:** level of satisfaction with cleanliness (1-5)
- **Satisfaction:** Airline satisfaction level(Satisfaction, neutral or dissatisfaction).

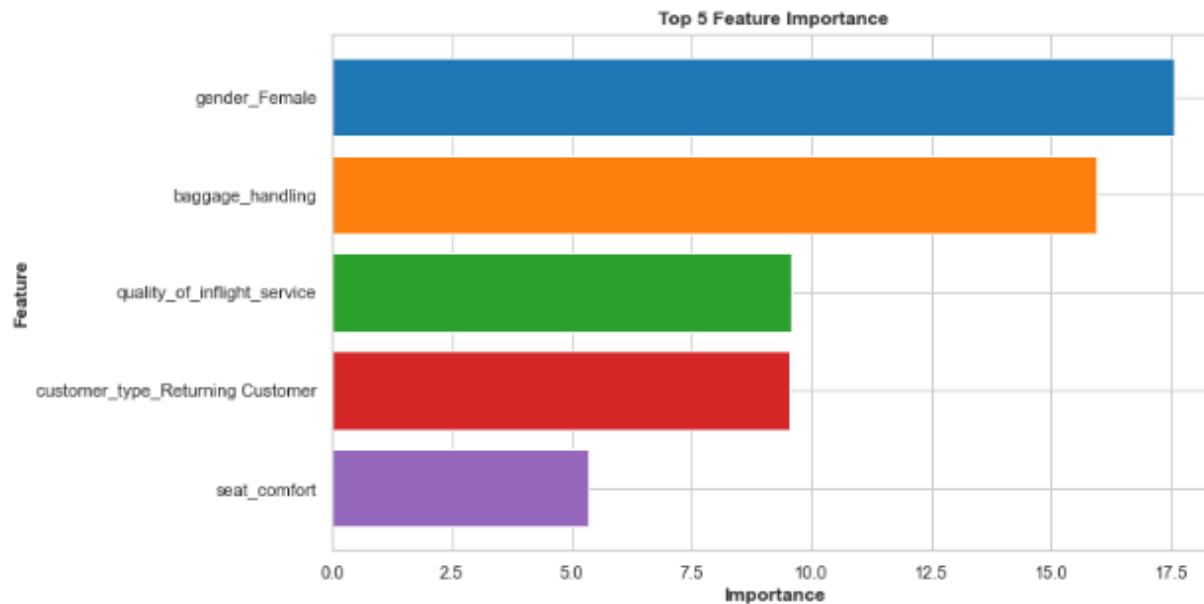

Modeling

- Best Model: **CatBoost Classifier**
 - **97% F1-Score**
 - **AUC = 96%**
- Evaluation Metric:
 - F1-Score is the harmonic mean of recall and precision.
 - AUC tells how well the model performs.
- Important Features:
 - Gender female
 - Baggage handling
 - Quality of inflight service
 - Customer type: Returning customer
 - Seat comfort

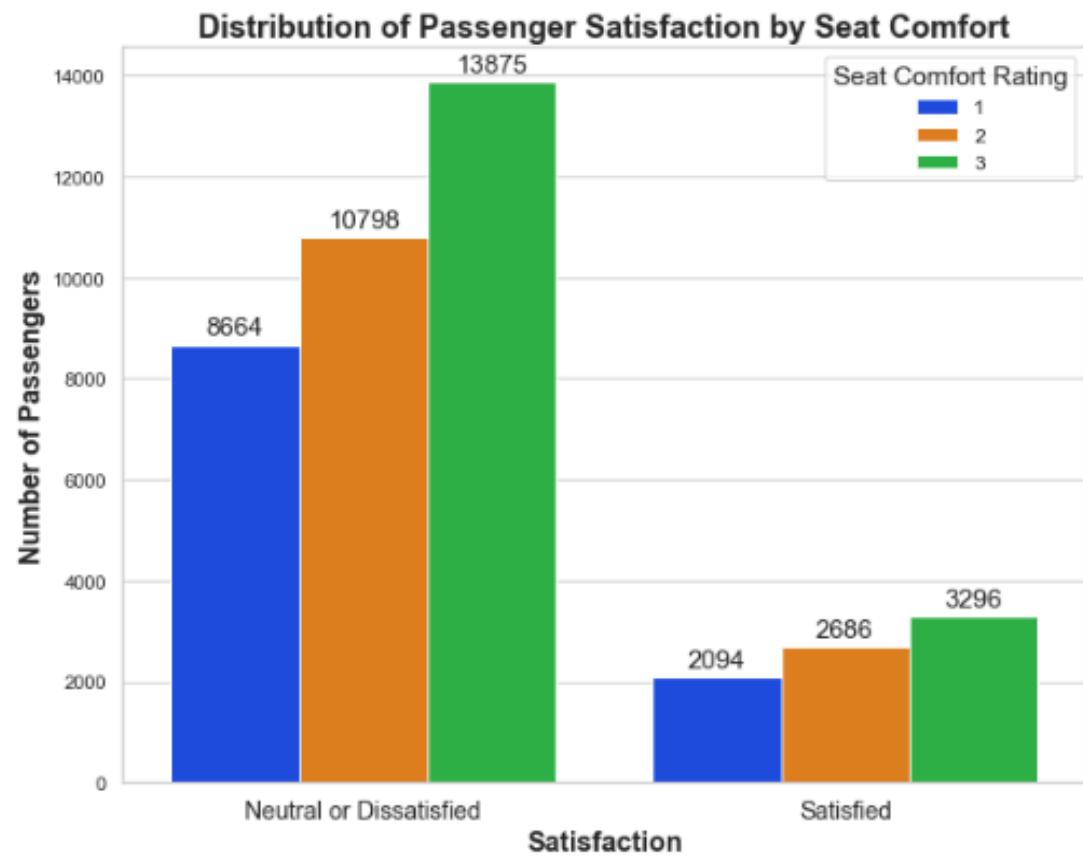

Important Features

- Top 5 Important Features:

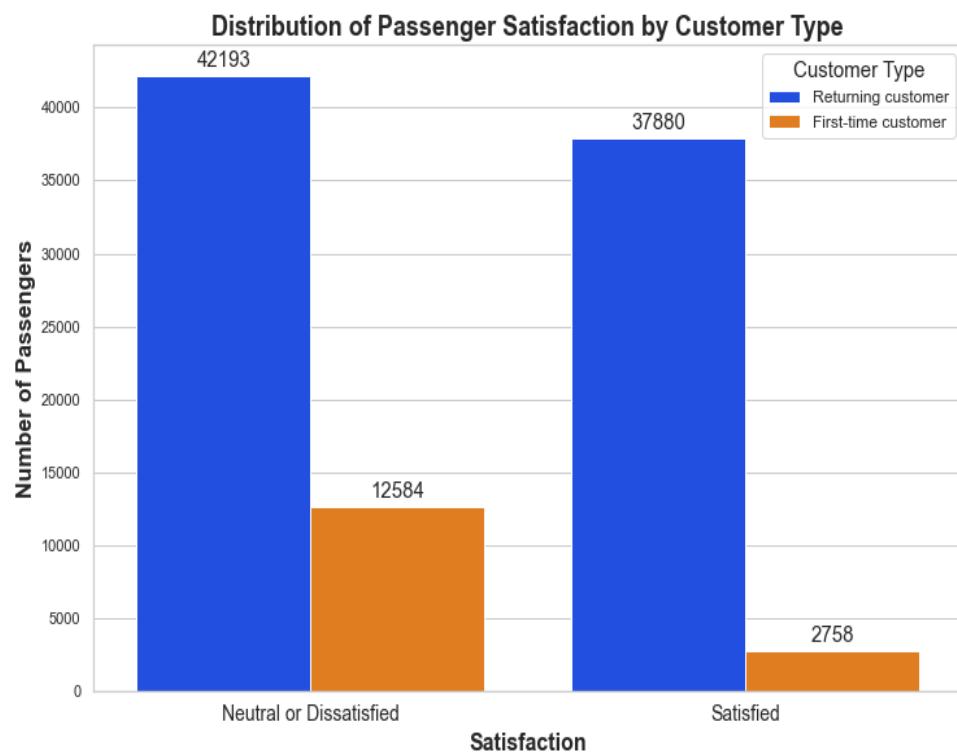

Seat Comfort

- Uncomfortable seats mean unhappy passengers.

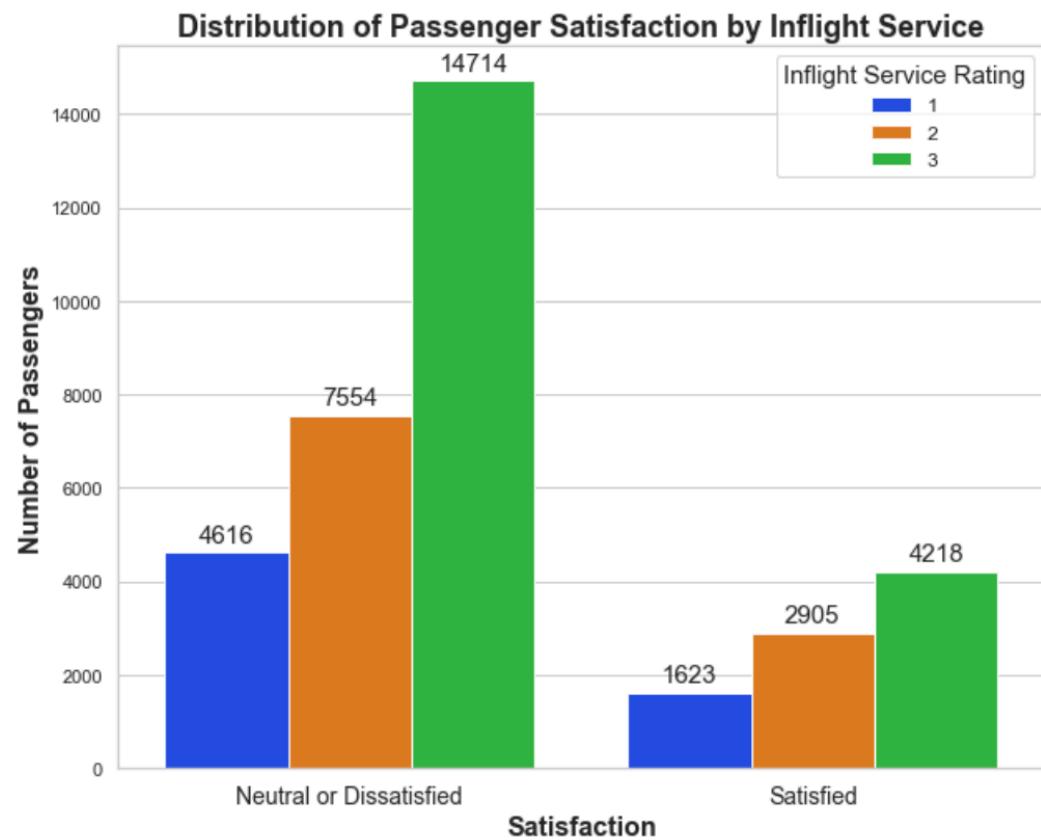

Returning Customers

- There were significantly more returning customers than first-time customers in the dataset.
- **Recommendations:**
 - Offer loyalty programs or rewards to returning customers.
 - Offer special perks or benefits to returning customers.
 - Priority boarding.
 - Free baggage check.
 - Provide personalized experiences to returning customers.
 - Offering special promotions based on their past behavior.

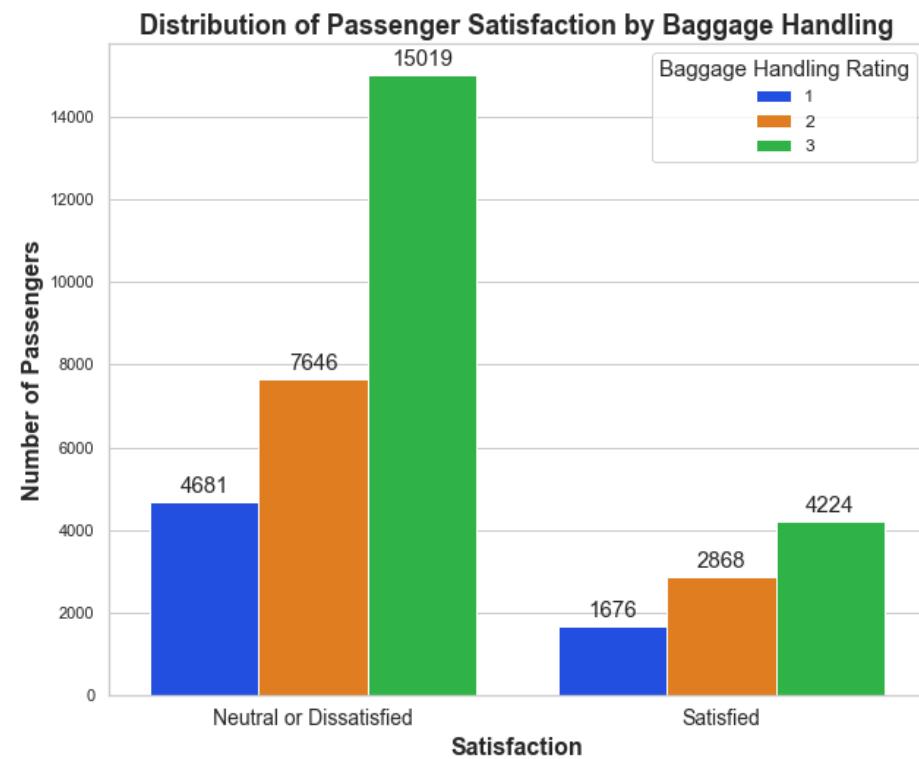

Inflight Service

- Poor inflight services will cause passengers to leave neutral or dissatisfied.
- **Recommendations:**
 - Improve the quality of beverages and meals.
 - Higher standards.
 - Cater to dietary needs.
 - Train attendants to be more attentive to passenger's needs.
 - Upgrade inflight entertainment systems, and ensure they work properly before every flight.

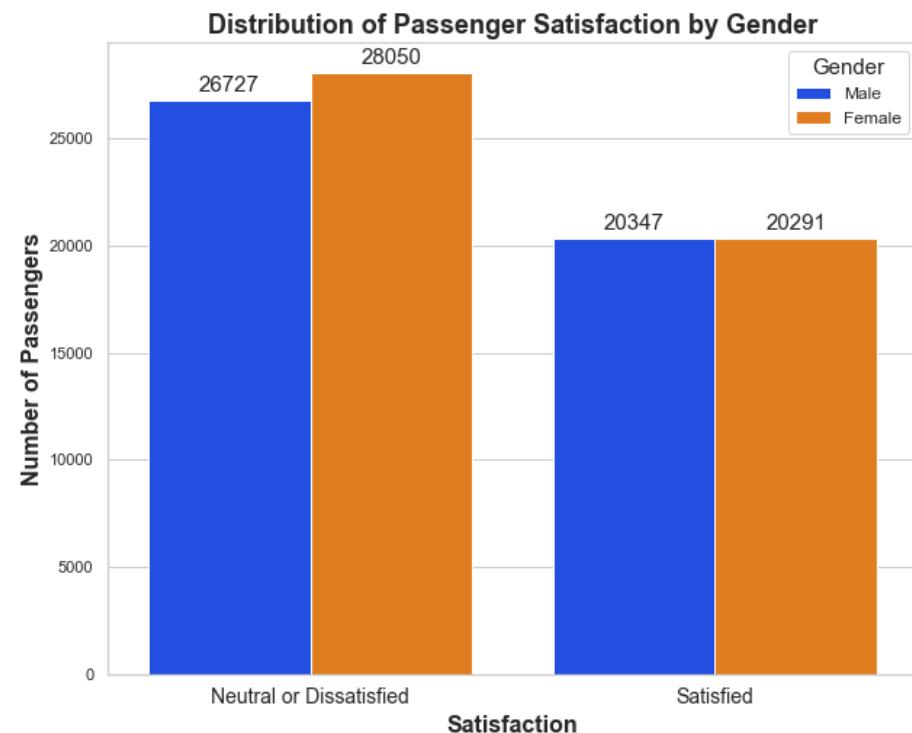

Baggage Handling

- Passengers that are unhappy with the care of their luggage are likely to be dissatisfied.
- **Recommendations:**
 - Invest in luggage tracking technology, to track lost luggage.
 - New training for baggage handlers to ensure that luggage is handled with care and efficiently delivered to customers.
 - Increase the speed and efficiency of baggage handling processes.
 - Baggage check-in.
 - Loading and unloading bags.
 - Getting bags to baggage claim.

Gender Female

- The female gender is more impactful than the male gender for this model.
- There are more females than males in this dataset.
- **Recommendations:**
 - Ensure that their services are inclusive and welcoming to all genders.
 - Any biases in data collection need to be addressed.
 - Investigate whether there are any specific areas where female passengers have unique concerns or needs.

Future Work

- After adjustments have been made from the recommendations provided, perform another analysis to see if customer satisfaction has improved.
- Try different models with different tuning techniques to see if they perform better.
- Collect additional data: The dataset used in this analysis only includes a single airline. Collecting data from multiple airlines may provide more insights and make the results more generalizable.

Thank you
